

Transportation operating plan

2026 planning review - profit, cash and operating actions

Synthetic portfolio analysis. Recommendations are proposed; no employer outcomes are claimed.

Decision requested

Approve a conditional operating plan and monthly reforecast process. Review volume, price realization and cost inflation together before changing service capacity or contract pricing.

Financial case

The base case produces \$11.31M revenue and \$124,447 EBITDA (1.1%). Its December cash is \$282,038, only \$32,038 above the assumed floor. The downside produces a \$616,492 EBITDA loss and a \$145,022 negative ending cash balance. The upside is a sensitivity, not committed guidance.

Case	Revenue	EBITDA	December cash
Base	\$11,308,100	\$124,447	\$282,038
Downside	\$10,427,291	(\$616,492)	(\$145,022)
Upside	\$11,829,914	\$534,147	\$426,997

Tradeoffs and alternatives

A blanket price increase may reduce volume or retention. Capacity reductions may worsen service. The model does not estimate customer elasticity, contract rights or staffing feasibility. Validate these before committing.

Approval and execution

Conditions before approval

Confirm segment definitions, price realization, cost allocations and cash timing. Establish owners for each variance. Preserve the synthetic H1 source records while updating forecast inputs.

Proposed owner	Timing	Required action
Finance + Sales	Day 5	Validate July price/cost bridge and contract assumptions
Commercial + Operations	Day 10	Review low-margin contracts and capacity tradeoffs
Finance lead	Close + 5 days	Reforecast if volume misses plan by more than 5%
Treasury + Operations	Weekly	Escalate cash below the \$250k assumed floor

Post-decision review

The following observations are a separate synthetic review exercise. They demonstrate follow-through without claiming realized results.

Measure	Frozen target	Simulated observation	Response
July revenue	\$936,000	\$872,000	Reforecast volume / price
July EBITDA	(\$28,000)	(\$48,000)	Review margin drivers
July cash	\$420,000	\$401,000	Monitor against floor
On-time service	95.0%	93.2%	Review service capacity

Model basis and review

Calculation method

The model preserves 18 H1 segment records and builds H2 units, price, unit cost, fixed cost and opex. Monthly operating rates compound. A July quantity-price-cost bridge reconciles EBITDA to an explicit reference plan. Cash derives from EBIT, cash taxes, noncash depreciation, receivables/payables changes and capex.

Material limitations

Cash uses a 30-day month convention and flat 35-day receivables / 20-day variable-cost payables. Taxes apply only to positive monthly EBIT. No loss carryforwards, borrowing, interest, dividends or full balance sheet are modeled. The cash schedule begins in July; H1 cash is unavailable.

Scenario capture and refresh

The comparison uses three sequential recalculations of one active Excel build, captured October 3, 2026. Change Assumptions D5 to select a case. Recalculate in Excel and refresh comparisons after changing inputs; PDF figures are a dated snapshot.

Ownership represented

Quincy Jones designed the analysis, built the model and controls, evaluated alternatives, and authored the decision and monitoring workflow. Proposed corporate owners are roles inside the case, not positions held by Quincy.

Forensic review

Independent calculations, reconciliation checks and input-change tests were completed before publication. The downloadable audit explains scope and engine limitations. Artifact-tool recalculation and exported caches were checked; desktop Excel was not available for an application-level test.
