

J.B. Hunt Transport Services, Inc. (NASDAQ: JBHT)

Investment memo | September 29, 2026 | Illustrative independent valuation

Base case: \$150 per share DCF value versus \$226.07 market price; approximately 34% downside to modeled value. This is a valuation case, not a buy/sell recommendation.

Thesis

JBHT combines an asset-intensive intermodal and truckload network with dedicated contract services. The valuation depends on operating margin recovery and disciplined equipment spending. A five-year model using reported 2021–2025 financials produces a \$150 base-case DCF value. The market price implies materially stronger long-run cash generation than this operating case.

Metric	Base case / reference
FY2025 revenue	\$11,999 million
FY2025 EBIT margin	7.2%
DCF assumptions	8.0% WACC 2.5% terminal growth
Sensitivity range	\$109–\$238 per share (7.0–9.0% WACC; 1.5–3.5% terminal growth)
Trading comps	14.5x EV / EBITDA vs 21.3x peer median*

Valuation method

Unlevered free cash flow is discounted at year-end over 2026E–2030E, with a Gordon growth terminal value. The enterprise-to-equity bridge subtracts FY2025 debt and adds cash; diluted shares are implied from the observed market capitalization and share price. Trading comparisons use Old Dominion, C.H. Robinson and Landstar; the peer median excludes JBHT.

Key risks and limitations

The forecast is a portfolio exercise, not company guidance. Revenue growth, EBIT margin, capital expenditures, working capital ratios, taxes and distributions are user-editable. Other assets and liabilities and debt are held flat; cash conversion simplifies operating balance movements; share count is static. The valuation is sensitive to WACC and terminal growth. Verify updated filings, price data and share count before using this analysis for a current investment decision.
