

Transportation operating plan

2026 profit plan with July–December integrated statements

Synthetic portfolio analysis. Recommendations are proposed; no employer outcomes are claimed.

Decision requested

Approve the base plan conditionally; establish a downside funding response and monthly reforecast before committing spending.

Financial case

The base full-year 2026 operating view (synthetic H1 actuals plus H2 forecast) produces \$11,308,100 revenue, \$124,447 EBITDA (1.10% margin) and \$508,855 ending cash. Minimum monthly cash is \$279,760. Closing debt is \$540,000. All six monthly balance sheets reconcile within the tested tolerance.

Case	FY revenue	FY EBITDA	December cash
Base	\$11,308,100	\$124,447	\$508,855
Downside	\$10,427,291	(\$616,492)	(\$14,908)
Upside	\$11,829,914	\$534,147	\$697,166

Tradeoffs and alternatives

A blanket price increase may reduce volume or retention. Capacity reductions may worsen service. The model does not estimate customer elasticity, contract rights or staffing feasibility. Validate these before committing. Opening balances and explicit collection lags change the cash result relative to the earlier simplified model.

Approval and execution

Conditions before approval

Validate opening cash and AR/AP, debt, tax-loss usability, collection timing and capex. Escalate the \$264,908 downside shortfall against the \$250,000 proposed floor.

Proposed owner	Timing	Required action
Finance + Sales	Day 5	Validate July price/cost bridge and contract assumptions
Commercial + Operations	Day 10	Review low-margin contracts and capacity tradeoffs
Finance lead	Close + 5 days	Reforecast if volume misses plan by more than 5%
Treasury + Operations	Weekly	Escalate cash below the \$250k assumed floor

Post-decision review

The following observations are a separate synthetic review exercise. They demonstrate follow-through without claiming realized results.

Legacy exercise measure	Frozen target	Simulated observation	Response
July revenue	\$936,000	\$872,000	Reforecast volume / price
July EBITDA	(\$28,000)	(\$48,000)	Review margin drivers
July cash	\$420,000	\$401,000	Monitor against floor
On-time service	95.0%	93.2%	Review service capacity

Model basis and review

Calculation method

Preserved 18 H1 synthetic segment records feed the operating history. H2 forecasting links units, pricing and costs to collection/payment schedules, PP&E/depreciation, debt/interest, cash taxes, income, cash flow and monthly balance sheets. Full-year revenue and EBITDA include H1; cash and balance-sheet forecasts cover July–December.

Material limitations

no inventory, deferred tax accounting, dividends or new borrowing. Opening tax losses are zero and future losses are assumed fully usable. Collection patterns and asset lives require real-source validation. Earlier operating cash results are superseded because the working-capital and opening-balance scope changed.

Scenario capture and refresh

The comparison uses three sequential recalculations of one active Excel build, captured October 3, 2026. Change Assumptions D5 to select a case. Recalculate in Excel and refresh comparisons after changing inputs; PDF figures are a dated snapshot.

Ownership represented

Quincy Jones developed this independent portfolio analysis with AI assistance. The package includes the model, controls, alternatives and proposed decision workflow. Proposed corporate owners are roles inside the case, not positions held by Quincy.

Forensic review

Independent calculations, reconciliation checks and input-change tests were completed before publication. The downloadable audit explains scope and engine limitations. Artifact-tool input edits and exported caches were checked. A second LibreOffice engine reproduced 2,134 numeric base-case formula caches. Desktop Microsoft Excel was not available; compatibility testing is limited to the stated engines.
